about Dr. Emil Svoboda, PhD, DDS

Dr. Emil Svoboda graduated from the University of Toronto with a PhD and DDS. He practices General and Implant Dentistry in his clinic in Brampton, Ontario. He has earned Fellowships with the Academy of General Dentistry and the American Academy of Implant Dentistry. He is also a Diplomate with the American Board of Oral Implantology/Implant Dentistry. Dr. Svoboda has published dental research articles and has lectured worldwide about implant dentistry. He was recently awarded with the Honoured Fellow designation from the American Academy of Implant Dentistry in Las Vegas. This was for significant contribution to implant dentistry. He was also given the Award of Merit by the Ontario Dental Association for significant contribution to dentistry.

course description

Dr. Svoboda will show how to approach the “alveolar ridge with moderate deficiency in width” and place an immediate implant with a high degree of certainty. He has been developing his technique for bone manipulation over the past 20 years. His bone spreading technique utilizing handpiece driven screws is both practical for the patient and efficient for the dentist.

Dr. Svoboda believes that the bone spreading graft is primary and should be considered before any other technique. In cases where bone spreading may be insufficient, it can be used to make the alternative graft easier and it can be used to rescue the failing graft. What a great service for patients and dentists alike!

Dr Svoboda will also speak about how he modifies bone quality. This makes bone manipulation possible under a greater number of conditions. Understanding this concept will likely make all your grafts more successful.

course schedule

Registration: Starts at 8:00am

Lecture: 8:30am-12:00pm

Concept development, changing bone quality, instrumentation and technique for bone manipulation, case selection, case studies.

Workshop: 1:00pm-3:00pm

Hands on workshop using models and instrumentation to practice bone manipulation. Focus will be on handpiece driven screw mediated expansion techniques.

Lecture: 3:00pm-4:00pm

Discussions about the workshop and bone manipulation techniques. Further review of reconstructive cases involving bone manipulation and dental implants.

Workgroup: 4:00pm-5:00pm

Discussion of cases brought by students. Bring models and x-rays. Powerpoint digital slides are desirable for sharing cases.
